- Course introduction
- Exam and practicum
- Semantics of traditional programming languages
- Basic lambda calculus

Test

The INFDEV team

# **Course introduction**

### Course introduction

Test

The INFDEV team

#### Course topics

- We will discuss a completely new paradigm for expressing programs
- This paradigm, functional programming, is based on different premises on computation
- It gives guarantees of correctness in complex places, like parallelism or separation of concerns
- It requires a radical conceptual shift in the way you think about programming

### Course introduction

Test

The INFDEV team

### Course topics

- We will begin with a short discussion on traditional programming language extbfsemantics
- We will then show the extbflambda calculus, which is the foundation for functional languages
- 0
- We will then bridge the gap between theory and practice
- We will translate the lambda calculus into two mainstream functional languages: F# and Haskell
  - This will cover a huge chunk of possible applications in countless other languages and libraries, from C# LINQ to Java streams, to Scala, Scheme, Closure, etc.

Test

The INFDEV team

# **Examination**

### Examination

Test

The INFDEV team

#### Exam structure

- There is a theoretical exam, where you show understanding of the basic principles
- There is a practical exam, where you show understanding of their concrete applications

### Examination

Test

The INFDEV team

#### Theoretical exam

- One question on a lambda calculus program execution
- One question on the type system of a lambda calculus program, F# program, or Haskell program
- Both questions must be answered correctly to get a extbfvoldoende

# Examination

Test
The INFDEV
team

Build, in groups of max four, any of the following applications in either Haskell or F#:

- A 2D simulation of a supermarket with customers, cash registers, and various aisles
- A 2D simulation of a supply chain with trucks, containers, and ships
- An interpreter for a Python-like language (with a parser for an extra challenge)
- An interpreter for the lambda calculus (with a parser for an extra challenge)

We will get together at the end of the course, and the teacher(s) will remove a few lines from each of your applications. **Individually** you will have to restore them within a few hours.

Test

The INFDEV team

# Semantics of traditional programming languages

Test

The INFDEV team

- Traditional, imperative programming languages are based on sharing memory through instructions
- This means that subsequent instructions are not independent from each other
- Any function call makes use of the available memory

Test

The INFDEV team

For example, consider the semantic rules that describe the working of ";"

First we run  $s_1$  with the initial memory, then we run  $s_2$  with the modified memory.

Test

The INFDEV team

For example, consider the semantic rules that describe the working of ";"

First we run  $s_1$  with the initial memory, then we run  $s_2$  with the modified memory.

$$\frac{\langle s_1, S, H \rangle \to \langle S_1, H_1 \rangle \wedge \langle s_2, S_1, H_1 \rangle \to \langle S_2, H_2 \rangle}{\langle (s_1; s_2), S, H \rangle \to \langle S_2, H_2 \rangle}$$

Test

The INFDEV team

What does "first we run  $s_1$  with the initial memory, then we run  $s_2$  with the modified memory" imply?

Test

The INFDEV team

What does "first we run  $s_1$  with the initial memory, then we run  $s_2$  with the modified memory" imply?.

- The same instructions, executed at different moments, will produce different results.
- Change the order of some method calls, and some weird dependence might cause bugs or break things.

Test

The INFDEV team

#### Goals

- Our goal is to ensure that behaviour of code is consistent.
- Change the order of some method calls, and the results remain the same.
- This makes it easier to test, parallelize, and in general ensure correctness.

Test

The INFDEV team

How do we achieve this?

Test

The INFDEV team

How do we achieve this?

We give (shared) memory up: every piece of code is a function which output only depends on input.

This very important property is called **referential transparency**.

Test

The INFDEV team

# Basic lambda calculus

Test

The INFDEV team

#### Introduction

- The (basic) lambda calculus is an alternative mechanism to Turing Machines and the Von Neumann architecture.
- It is very different, but has equivalent expressive power.
- It is the foundation of all functional programming languages.

Test

The INFDEV team

### Substitution principle

- The (basic) lambda calculus is truly tiny when compared with its power.
- It is based on the substitution principle: calling a function with some parameters returns the function body with the variables replaced.
- There is no memory and no program counter: all we need to know is stored inside the body of the program itself.

Test

The INFDEV team

A lambda calculus program (just *program* from now on) is made up of three syntactic elements:

- Variables: x, y, ...
- Abstractions (function declarations with one parameter):  $\lambda x \to t$  where x is a variable and t is the function body (a program).
- Applications (function calls with one argument):  $t\ u$  where t is the function being called (a program) and u is its argument (another program).

Test

The INFDEV team

A simple example would be the identity function, which just returns whatever it gets as input

 $(\lambda x \rightarrow x)$ 

Test

The INFDEV team

We can call this function with a variable as argument, by writing:

 $((\lambda x \rightarrow x) v)$ 

Test

The INFDEV team

A lambda calculus program is computed by replacing lambda abstractions applied to arguments with the body of the lambda abstraction with the argument instead of the lambda parameter:

Test

The INFDEV team

A lambda calculus program is computed by replacing lambda abstractions applied to arguments with the body of the lambda abstraction with the argument instead of the lambda parameter:

$$\overline{(\lambda x \to t) \ u \to_{\beta} t[x \mapsto u]}$$

 $t[x \mapsto u]$  means that we change variable x with u within t

Tes

The INFDEV team

 $((\lambda x \rightarrow x) v)$ 

Tes

The INFDEV team

$$((\lambda x \rightarrow x) \ v)$$

$$((\lambda x \rightarrow x) v)$$

Tes

The INFDEV team

 $((\lambda x \rightarrow x) v)$ 

Tes

The INFDEV team

 $((\lambda x \rightarrow x) v)$ 

v

Test

The INFDEV team

Multiple applications where the left-side is not a lambda abstraction are solved in a left-to-right fashion:

Test

The INFDEV team

Multiple applications where the left-side is not a lambda abstraction are solved in a left-to-right fashion:

$$\frac{t \to_{\beta} t' \land u \to_{\beta} u' \land t' u' \to_{\beta} v}{t u \to_{\beta} v}$$

Tes

The INFDEV team

Variables cannot be further reduced, that is they stay the same:

Tes

The INFDEV team

Variables cannot be further reduced, that is they stay the same:

$$\overline{x \to_{\beta} x}$$

Test

The INFDEV team

We can encode functions with multiple parameters by nesting lambda abstractions:

$$(\lambda x \rightarrow y \rightarrow (x y))$$

Test

The INFDEV team

The parameters are then given one at a time:

(((
$$\lambda x \rightarrow y \rightarrow (x y)$$
) A) B)

Tes

(((
$$\lambda x \rightarrow y \rightarrow (x y)) A) B$$
)

Tes

(((
$$\lambda x \rightarrow y \rightarrow (x y)) A) B$$
)

(((
$$\lambda x \rightarrow y \rightarrow (x y))$$
 A) B)

Tes

$$(((\lambda x \rightarrow y \rightarrow (x y)) A) B)$$

Tes

$$(\underline{((\lambda x \rightarrow y \rightarrow (x y)) A)} B)$$

$$((\lambda y \rightarrow (A y)) B)$$

Tes

$$((\lambda y \rightarrow (A y)) B)$$

Tes

$$((\lambda y \rightarrow (A y)) B)$$

$$((\lambda y \rightarrow (A y)) B)$$

Tes

The INFDEV team

 $((\lambda y \rightarrow (A y)) B)$ 

Tes

The INFDEV team

$$((\lambda y \rightarrow (A y)) B)$$

(A B)

Test

The INFDEV team

# Closing up

Test

The INFDEV team

#### Example executions of (apparently) nonsensical programs

- We will now exercise with the execution of various lambda programs.
- Try to guess what the result of these programs is, and then we shall see what would have happened.

Test

The INFDEV team

#### What is the result of this program execution?

(((
$$\lambda x \rightarrow y \rightarrow (x y)$$
) ( $\lambda z \rightarrow (z z)$ )) A)

Tes

$$(((\lambda x \rightarrow y \rightarrow (x y)) (\lambda z \rightarrow (z z))) A)$$

Tes

$$(((\lambda \mathtt{x} {\rightarrow} \mathtt{y} {\rightarrow} (\mathtt{x} \ \mathtt{y})) \ (\lambda \mathtt{z} {\rightarrow} (\mathtt{z} \ \mathtt{z}))) \ \mathtt{A})$$

(((
$$\lambda x \rightarrow y \rightarrow (x y)$$
) ( $\lambda z \rightarrow (z z)$ )) A)

Tes

$$(((\lambda x \rightarrow y \rightarrow (x y)) (\lambda z \rightarrow (z z))) A)$$

Tes

$$(\underline{((\lambda x \rightarrow y \rightarrow (x y)) (\lambda z \rightarrow (z z)))} A)$$

$$((\lambda y \rightarrow ((\lambda z \rightarrow (z z)) y)) A)$$

Tes

$$((\lambda y \rightarrow ((\lambda z \rightarrow (z z)) y)) A)$$

Tes

$$((\lambda \mathtt{y} {\rightarrow} ((\lambda \mathtt{z} {\rightarrow} (\mathtt{z} \ \mathtt{z})) \ \mathtt{y})) \ \mathtt{A})$$

$$((\lambda y \rightarrow ((\lambda z \rightarrow (z z)) y)) A)$$

Tes

The INFDEV team

 $\underline{\text{(($\lambda y$ $\rightarrow$ (($\lambda z$ $\rightarrow$ (z z)) y)) A)}}$ 

Tes

$$\underline{\text{(($\lambda y$ $\rightarrow$ (($\lambda z$ $\rightarrow$ (z z)) y)) A)}}$$

$$((\lambda z \rightarrow (z z)) A)$$

Tes

The INFDEV team

 $((\lambda z \rightarrow (z z)) A)$ 

Tes

$$((\lambda z \rightarrow (z z)) A)$$

$$((\lambda z \rightarrow (z z)) A)$$

Tes

The INFDEV team

 $((\lambda z \rightarrow (z z)) A)$ 

Tes

$$((\lambda z \rightarrow (z z)) A)$$

Test

The INFDEV team

> What is the result of this program execution? Watch out for the scope of the two "x" variables!

$$(((\lambda x \rightarrow x \rightarrow (x x)) A) B)$$

Tes

(((
$$\lambda x \rightarrow x \rightarrow (x x)) A) B$$
)

Tes

(((
$$\lambda x \rightarrow x \rightarrow (x x)) A) B$$
)

(((
$$\lambda x \rightarrow x \rightarrow (x x))$$
 A) B)

Tes

The INFDEV team

 $(((\lambda x \rightarrow x \rightarrow (x x)) A) B)$ 

Tes

$$(\underline{((\lambda x \rightarrow x \rightarrow (x x)) A)} B)$$

$$((\lambda x \rightarrow (x x)) B)$$

Tes

The INFDEV team

 $((\lambda x \rightarrow (x x)) B)$ 

Tes

$$((\lambda x \rightarrow (x x)) B)$$

$$((\lambda x \rightarrow (x x)) B)$$

Tes

The INFDEV team

 $((\lambda x \rightarrow (x x)) B)$ 

Tes

The INFDEV team

$$((\lambda x \rightarrow (x x)) B)$$

(B B)

Test

The INFDEV team

The first "x" gets replaced with "A", but the second "x" shadows it!

 $(((\lambda x \rightarrow x \rightarrow (x x)) A) B)$ 

Test

The INFDEV team

A better formulation, less ambiguous, would turn:

(((
$$\lambda x \rightarrow x \rightarrow (x x)) A) B$$
)

...into:

$$(((\lambda y \rightarrow x \rightarrow (x x)) A) B)$$

Tes

(((
$$\lambda y \rightarrow x \rightarrow (x x)) A) B$$
)

Tes

(((
$$\lambda y \rightarrow x \rightarrow (x x)) A) B$$
)

$$(((\lambda y \rightarrow x \rightarrow (x x)) A) B)$$

Tes

The INFDEV team

 $(\underline{((\lambda y \rightarrow x \rightarrow (x x)) A)} B)$ 

Tes

$$(\underline{((\lambda y \rightarrow x \rightarrow (x x)) A)} B)$$

$$((\lambda x \rightarrow (x x)) B)$$

Tes

The INFDEV team

 $((\lambda x \rightarrow (x x)) B)$ 

Tes

$$((\lambda x \rightarrow (x x)) B)$$

$$((\lambda x \rightarrow (x x)) B)$$

Tes

The INFDEV team

 $\frac{\text{((}\lambda\text{x}\rightarrow\text{(x x)) B)}}{}$ 

Tes

The INFDEV team

$$((\lambda x \rightarrow (x x)) B)$$

(B B)

Test

The INFDEV team

What is the result of this program execution? Is there even a result?

 $((\lambda x \rightarrow (x x)) (\lambda x \rightarrow (x x)))$ 

Tes

$$((\lambda x \rightarrow (x x)) (\lambda x \rightarrow (x x)))$$

Tes

$$((\lambda \mathtt{x} {\rightarrow} (\mathtt{x} \ \mathtt{x})) \ (\lambda \mathtt{x} {\rightarrow} (\mathtt{x} \ \mathtt{x})))$$

$$\underline{\text{(($\lambda x \rightarrow (x \ x))} \ ($\lambda x \rightarrow (x \ x))$)}$$

Tes

The INFDEV team

 $\underline{\text{(($\lambda x \rightarrow (x x)) ($\lambda x \rightarrow (x x)))}}$ 

Tes

$$((\lambda x \rightarrow (x \ x)) \ (\lambda x \rightarrow (x \ x)))$$

$$((\lambda x \rightarrow (x x)) (\lambda x \rightarrow (x x)))$$

Tes

$$((\lambda x \rightarrow (x x)) (\lambda x \rightarrow (x x)))$$

Tes

$$((\lambda \mathtt{x} {\rightarrow} (\mathtt{x} \ \mathtt{x})) \ (\lambda \mathtt{x} {\rightarrow} (\mathtt{x} \ \mathtt{x})))$$

$$((\lambda x \rightarrow (x x)) (\lambda x \rightarrow (x x)))$$

Tes

The INFDEV team

 $\underline{\text{(($\lambda x \rightarrow (x x)) ($\lambda x \rightarrow (x x)))}}$ 

Tes

$$((\lambda x \rightarrow (x \ x)) \ (\lambda x \rightarrow (x \ x)))$$

$$((\lambda x \rightarrow (x x)) (\lambda x \rightarrow (x x)))$$

Tes

The INFDEV team

```
((\lambda x \rightarrow (x \ x)) \ (\lambda x \rightarrow (x \ x)))
```

It never ends! Like a while true: ..!

Test

The INFDEV team

Ok, I know what you are all thinking: what is this for sick joke? This is no real programming language!

- We have some sort of functions and function calls
- We do not have booleans and if's
- We do not have integers and arithmetic operators
- We do not have a lot of things!

Test

The INFDEV team

#### Surprise!

With nothing but lambda programs we will show how to build all of these features and more.

Tes

The INFDEV team

#### Stay tuned.

This will be a marvelous voyage.

#### This is it!

Test

The INFDEV team

The best of luck, and thanks for the attention!
